Coastal™

Active Ingredients: Imazaquin 7.62%, Prodiamine 17.68%, Simazine 27.2%

Protecting Southern Turf From Coast to Coast

Introducing the most all-encompassing and easy-to-use herbicide for southern turf available today. With three active ingredients combined in one jug, broad-spectrum Coastal™ herbicide can be used safely on all of the four major warm-season turf grasses without the need to tank-mix. This makes Coastal a smart choice when treating multiple lawns. Coastal outperforms the current industry leader on hard-to-control weeds, including crabgrass and *Poa annua.*

FEATURING

- ✔ Broad-spectrum, pre- and post-emergent broadleaf and grassy weed control
- ✔ Excellent resistance management tool
- ✔ Most economical *Poa annua* control available

Coastal Is the Ultimate Herbicide for Warm-Season Turfgrasses

- For use on golf courses, residential and commercial turf, athletic fields and sod farms
- Safe to use on Bermudagrass, centipede grass, St. Augustine grass and Zoysia grass
- Three active ingredients/modes of action broaden weed control spectrum and reduce mixing time, potential mistakes and jug disposal
- Post-emergent expansion control of key warm-season weeds such as doveweed, Virginia buttonweed and sedges

Active Ingredients: Imazaquin 7.62%, Prodiamine 17.68%, Simazine 27.2%

A Top Performer in University Trials Across the South

In preliminary trials conducted by Mississippi State University, University of Georgia, University of Tennessee, North Carolina State University, University of Florida, Louisiana State University and Texas A&M University, Coastal herbicide was shown to provide exceptional control of *Poa annua* and crabgrass, in addition to control of broadleaf weeds like white clover, henbit, lawn burweed, doveweed, Virginia buttonweed and others.

WEED CONTROL COMPARISON

Coastal at 64 oz rate applied April–June

WEED TYPE	COASTAL CONTROL		SPECTICLE CONTROL	
	PRE	POST	PRE	POST
Perennial Sedges	-	C	-	-
Kyllinga	-	C	C	S
Annual Sedges	-	S	C	-
Crabgrass	C	-	C	S
Goosegrass	C	S	C	-
Ryegrass	C	S	C	C
Poa	C	C	C	S
Lawn Burweed	C	C	C	-
Field Sandbur	C	S	C	-
Purple Deadnettle	C	C	-	-

WEED TYPE	COASTAL CONTROL		SPECTICLE CONTROL	
	PRE	POST	PRE	POST
Wild Garlic/ Onions	C	C	-	-
Carpetweed	C	S	-	-
Chickweed	C	S	C	S
White Clover	C	C	C	-
Corn Speedwell	C	C	C	-
Doveweed	C	C	C	S
Dollarweed	C	C	-	-
Henbit	C	C	C	-
Spurge	C	-	C	-
Virginia Buttonweed	S	C	-	-

C indicates control at labeled use rates
S indicates suppression or control on newly emerged plants up to the 1–2 leaf stage at the high use rate

indicates advantage
indicates disadvantage

Application Timing

Do not apply the 48 oz to 64 oz rate range if spring transition is underway or expected within 2–3 weeks unless occasional delayed green up and/or temporary yellowing can be tolerated. Do not apply more than 3 applications and a maximum of 113 ounces collectively in a 12-month period.

Application Options

Coastal may be applied as single application or as a reduced rate sequential program as explained below. Length of control duration, size and spectrum of weeds controlled post-emergent increase with the higher use rates. The use of a spray adjuvant is required to obtain post-emergence weed control. Apply in a minimum spray volume of 10 gallons per acre.

Application Flexibility — Factors to Consider

1. **Single application program** — Rates of 48 oz to 64 oz/acre. Use higher rates (60–64 oz) when longer residual and control of the full spectrum of weeds is desired. For post-emergent control of mature *Poa annua* or seedling Virginia buttonweed, doveweed and sedges, use the maximum 64 oz/acre rate.
2. **Sequential Application Program** — Applicators may use a sequential program of 32 oz followed by 32 oz/acre, 6–10 weeks apart when only the pre-emergent control spectrum is desired.

Important: Always read and follow label instructions. Some products may not be registered for sale or use in all states or counties. Please check with your state agency responsible for pesticide registration to ensure registration status.
